July 14, 2016 Reference No. 002012

Mr. Fred Campbell
Minnesota Pollution Control Agency
Remediation Division
Superfund and Emergency Response Section
520 Lafayette Road
St. Paul, Minnesota 55155-4194

Dear Mr. Campbell:

**Re: Data Report**
**April/May 2016 Residential Well Sampling Event**
**North Oaks, Minnesota**

On behalf of Whirlpool Corporation and Reynolds Metals Company, GHD Services Inc. (GHD) (formerly known as Conestoga-Rovers & Associates (CRA)) has prepared the following data report associated with the Residential Well Sampling Event conducted in North Oaks, Minnesota in April/May 2016. The April/May 2016 Residential Well Sampling Event was conducted in general accordance with the long-term monitoring program outlined in CRA's Feasibility Study Report (dated July 26, 2007 and approved by the Minnesota Pollution Control Agency (MPCA) on November 7, 2007) and as proposed in GHD's letter to MPCA dated April 11, 2016.

A discussion of the work performed and summary of the sampling results are presented below.

## 1. Sampling Program

During the period from April 26, 2016 through May 5, 2016, GHD and MPCA attempted to collect samples from a total of 33 residential well locations in North Oaks. Samples were only collected from well locations where expressed permission was obtained and a water source at the residence was accessible (31 locations). Samples were not collected from two proposed locations because the resident declined sampling/did not respond or had their water turned off for the season (see field notes in Table 1).

Where possible, samples were collected from an outside tap and/or from an untreated water source (i.e., not softened or filtered). Prior to sampling, the tap was allowed to run (purge) for approximately 20 minutes to purge the water line and pressure tank of residual water. The purge rate was measured and recorded. If a sample was collected from an outside tap, the water was directed via hose to an area of the yard that minimized the creation of pooled water or ice in an undesirable location. Field measurements for pH, conductivity, temperature, dissolved oxygen, and oxidation reduction potential (ORP) were taken after purging, at the time of sampling. Four (4) duplicate samples, four (4)

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

field blank samples, and two (2) matrix spike/matrix spike duplicate (MS/MSD) samples were collected for quality assurance/quality control (QA/QC) purposes. A sampling summary is provided in Table 1.

Water samples were collected directly from the tap after the purge hose was disconnected. Samples were placed on ice immediately following sample collection and were sent by courier to the laboratory using standard chain-of-custody procedures. Samples were submitted for analysis of VOCs and chloride to TestAmerica Laboratories, Inc. (TAL) in Buffalo, New York. VOC samples were submitted for low level VOC analysis by Method 524.2. Chloride samples were submitted for analysis by Method 300.0A. A trip blank was included with each sample cooler containing VOC samples.

## 2. Sampling Results

Laboratory analytical reports and GHD's Data Quality Assessment and Validation memorandum associated with the April/May 2016 Residential Well Sampling Event are provided as Attachments A and B, respectively. A summary of analytical results from the April/May 2016 Residential Well Sampling Event is presented in Table 2. Table 2 also presents the current Minnesota Department of Health (MDH) Health-Based Guidance (HBG) for comparison.

The April/May 2016 sampling results are generally consistent with results from previous sampling rounds conducted from October 2004 through October 2015.

Vinyl chloride results from the April/May 2016 Residential Well Sampling Event are presented on Figure 1. As shown on Figure 1 and in Table 2, vinyl chloride was not detected in any of the residential well samples collected in April/May 2016. The method detection limit (MDL) associated with the April/May 2016 laboratory results for vinyl chloride is 0.18 µg/L (i.e. any vinyl chloride concentrations detected between the MDL [0.18 µg/L] and the reporting limit (RL) [0.2 µg/L] would have been reported and flagged as estimated [J]). The MDH Health Risk Limit (HRL) for vinyl chloride is 0.2 µg/L.

Updated graphs of historical vinyl chloride sampling results at residential wells where vinyl chloride has been detected previously are provided in Attachment C.

No additional Site-related VOC[1] or other frequently-detected compounds were detected in residential well samples collected in April/May 2016.

Chloride concentrations in residential well samples collected in April/May 2016 ranged from 5.9 mg/L (8 West Shore Road) to 104 mg/L (4 Thompson Lane) (see Table 2). Chloride has historically been detected in residential wells at similar concentrations.

---

[1] As identified on Table 1 of MPCA's MDD Amendment dated August 26, 2008 (1,1,2-trichloroethene (TCE), vinyl chloride, trans-1,2-dichloroethene, 1,1-dichloroethane, benzene, toluene, and methyl ethyl keytone).

## 3. Future Sampling

The next residential well sampling event in North Oaks is scheduled for October 2016.

If you have any questions or require additional information, please call me at (651) 639-0913.

Sincerely,

GHD

Sarah Illi, P.E.

## Qualifiers

### GC/MS VOA

| Qualifier | Qualifier Description |
|---|---|
| * | LCS or LCSD is outside acceptance limits. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| F1 | MS and/or MSD Recovery is outside acceptance limits. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

**Receipt**
The samples were received on 4/29/2016 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.8º C and 3.1º C.

**GC/MS VOA**
Method(s) 524.2: The following samples contained residual chlorine upon receipt: W-160426-MB-01 (480-99299-1), W-160426-MB-02 (480-99299-2), W-160426-MB-03 (480-99299-3), W-160426-MB-05 (480-99299-5), W-160426-MB-06 (480-99299-6), W-160426-MB-07 (480-99299-7), W-160426-MB-08 (480-99299-8), W-160426-MB-10 (480-99299-10), W-160426-MB-11 (480-99299-11), W-160426-MB-12 (480-99299-12), W-160426-MB-13 (480-99299-13), W-160426-MB-14 (480-99299-14), W-160427-MB-15 (480-99299-15) and W-160427-MB-16 (480-99299-16).

Method(s) 524.2: Due to the specific client requirements for the MDL/RL, the recovery of Total Xylenes was below the RL, therefore could not be calculated out in the low level laboratory control spike (LLCS). The final recovery for Total Xylenes was 1.030ug/L in LLCS 480-299326. The following samples are impacted: W-160426-MB-01 (480-99299-1), W-160426-MB-02 (480-99299-2), W-160426-MB-03 (480-99299-3), W-160426-MB-04 (480-99299-4), W-160426-MB-05 (480-99299-5), W-160426-MB-06 (480-99299-6), W-160426-MB-07 (480-99299-7), W-160426-MB-08 (480-99299-8), W-160426-MB-09 (480-99299-9), W-160426-MB-10 (480-99299-10), W-160426-MB-11 (480-99299-11), W-160426-MB-12 (480-99299-12), W-160426-MB-13 (480-99299-13), W-160426-MB-14 (480-99299-14), W-160427-MB-15 (480-99299-15) and W-160427-MB-16 (480-99299-16).

Method(s) 524.2: The sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: TRIP BLANK (480-99299-34)

Method(s) 524.2: The following samples contained residual chlorine upon receipt: W-160427-MB-19 (480-99299-19), W-160427-MB-23 (480-99299-23), W-160427-MB-24 (480-99299-24), W-160428-MB-25 (480-99299-25) and W-160428-MB-27 (480-99299-27).

Method(s) 524.2: The samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, when verified by the laboratory, the pH was greater than 2 and the following samples were analyzed after 7 days from sampling: W-160428-MB-26 (480-99299-26), W-160428-MB-28 (480-99299-28), W-160428-MB-29 (480-99299-29), W-160428-MB-30 (480-99299-30), W-160428-MB-30 (480-99299-30[MS]), W-160428-MB-30 (480-99299-30[MSD]), W-160428-MB-39 (480-99299-31) and W-160428-MB-40 (480-99299-32).

Method(s) 524.2: Due to the specific client requirements for the MDL/RL, the recovery of Total Xylenes was below the RL, therefore could not be calculated out in the low level laboratory control spike (LLCS). The final recovery for Total Xylenes was 0.984ug/L in LLCS 480-300335. The following sample is impacted: W-160428-MB-41 (480-99299-33).

Method(s) 524.2: The following sample was collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory, and corrective action was not possible: W-160428-MB-41 (480-99299-33).

Method(s) 524.2: Due to the specific client requirements for the MDL/RL, the recovery of Total Xylenes was below the RL, therefore could not be calculated out in the low level laboratory control spike (LLCS). The final recovery for Total Xylenes was 0.956ug/L in LLCS 480-299600. The following samples are impacted: W-160426-MB-06 (480-99299-6[MS]) and W-160426-MB-06 (480-99299-6[MSD]).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**HPLC/IC**
Method(s) 300.0: The following samples were reported with elevated reporting limits for all analytes: W-160426-MB-01 (480-99299-1), W-160426-MB-02 (480-99299-2), W-160426-MB-03 (480-99299-3), W-160426-MB-05 (480-99299-5), W-160426-MB-06 (480-99299-6), W-160426-MB-07 (480-99299-7), W-160426-MB-08 (480-99299-8), W-160426-MB-09 (480-99299-9), W-160426-MB-10 (480-99299-10), W-160426-MB-11 (480-99299-11), W-160426-MB-12 (480-99299-12) and W-160426-MB-13 (480-99299-13). The sample was analyzed at a dilution based on conductivity screening results.

# Certification Summary

Client: GHD Services Inc.
Project/Site: 002012, Highway 96 Landfill

TestAmerica Job ID: 480-99299-1

## Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

| Authority | Program | EPA Region | Certification ID | Expiration Date |
|---|---|---|---|---|
| Minnesota | NELAP | 5 | 036-999-337 | 12-31-16 |

The following analytes are included in this report, but are not certified under this certification:

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 524.2 | | Water | Dibromomethane |
| 524.2 | | Water | Naphthalene |

The following analytes are included in this report, but certification is not offered by the governing authority:

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 524.2 | | Water | 1,1,2-Trichloro-1,2,2-trifluoroethane |
| 524.2 | | Water | 1,2-Dibromo-3-Chloropropane |
| 524.2 | | Water | 1,2-Dibromoethane |
| 524.2 | | Water | 1,3-Dichloropropane |
| 524.2 | | Water | 2-Butanone (MEK) |
| 524.2 | | Water | 2-Hexanone |
| 524.2 | | Water | 4-Isopropyltoluene |
| 524.2 | | Water | 4-Methyl-2-pentanone (MIBK) |
| 524.2 | | Water | Acetone |
| 524.2 | | Water | Acrylonitrile |
| 524.2 | | Water | Allyl chloride |
| 524.2 | | Water | Carbon disulfide |
| 524.2 | | Water | Dichlorofluoromethane |
| 524.2 | | Water | Ethyl ether |
| 524.2 | | Water | Iodomethane |
| 524.2 | | Water | m-Xylene & p-Xylene |
| 524.2 | | Water | o-Xylene |
| 524.2 | | Water | t-Butanol |
| 524.2 | | Water | trans-1,4-Dichloro-2-butene |
| 524.2 | | Water | Vinyl acetate |

# Method Summary

Client: GHD Services Inc.
Project/Site: 002012, Highway 96 Landfill

TestAmerica Job ID: 480-99299-1

| Method | Method Description | Protocol | Laboratory |
|---|---|---|---|
| 524.2 | Volatile Organic Compounds (GC/MS) | EPA-DW | TAL BUF |
| 300.0 | Anions, Ion Chromatography | MCAWW | TAL BUF |

**Protocol References:**

EPA-DW = "Methods For The Determination Of Organic Compounds In Drinking Water", EPA/600/4-88/039, December 1988 And Its Supplements.

MCAWW = "Methods For Chemical Analysis Of Water And Wastes", EPA-600/4-79-020, March 1983 And Subsequent Revisions.

# Detection Limit Exceptions Summary

Client: GHD Services Inc.
Project/Site: 002012, Highway 96 Landfill

TestAmerica Job ID: 480-99299-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but great than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedure do not indicate corrective action for detections below the laboratory's PQL.

| Method | Matrix | Analyte | Units | Client RL | Lab PQL |
|---|---|---|---|---|---|
| 524.2 | Water | Trichloroethene | ug/L | 0.20 | 0.5 |
| 524.2 | Water | Vinyl chloride | ug/L | 0.20 | 0.5 |

# Login Sample Receipt Checklist

Client: GHD Services Inc.

Job Number: 480-99299-1

**Login Number: 99299**

**List Source: TestAmerica Buffalo**

**List Number: 1**

**Creator: Conway, Curtis R**

| Question | Answer | Comment |
|---|---|---|
| Radioactivity either was not measured or, if measured, is at or below background | True | |
| The cooler's custody seal, if present, is intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the sample IDs on the containers and the COC. | True | |
| Samples are received within Holding Time (Excluding tests with immediate HTs).. | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter. | True | |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Sampling Company provided. | True | |
| Samples received within 48 hours of sampling. | False | |
| Samples requiring field filtration have been filtered in the field. | N/A | |
| Chlorine Residual checked. | True | |

TestAmerica Job ID: 480-99735-1

## Qualifiers

### GC/MS VOA

| Qualifier | Qualifier Description |
|---|---|
| * | LCS or LCSD is outside acceptance limits. |
| B | Compound was found in the blank and sample. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

## Job ID: 480-99735-1

### Laboratory: TestAmerica Buffalo

**Narrative**

**Job Narrative**
**480-99735-1**

**Receipt**
The samples were received on 5/6/2016 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7º C.

**GC/MS VOA**
Method(s) 524.2: Due to the specific client requirements for the MDL/RL, the recovery of Total Xylenes was below the MDL, therefore could not be calculated out in the low level laboratory control spike (LLCS). The final recovery for Total Xylenes was 0.925ug/L the LLCS 480-600342/6. The following samples are impacted: W-160505-MLR-01 (480-99735-1) and W-160505-MLR-02 (480-99735-2).

Method(s) 524.2: The analyte Methylene Chloride was detected in the Method Blank at a level above the project established reporting limit. The associated samples had levels of Methylene Chloride less than ten times that of the Method Blank value. All sample results for Methylene Chloride may potentially be due to laboratory contamination and should be evaluated accordingly. All associated positive sample results were qualified with a "B". The following samples are impacted: W-160505-MLR-05 (480-99735-5) and W-160505-MLR-06 (480-99735-6).

Method(s) 524.2: The low level laboratory control sample (LLCS) for analytical batch 480-301615 recovered outside control limits for the following analyte: Methylene Chloride. This analyte was biased high in the LLCS and was not detected in the associated samples; therefore, the data have been reported. The following samples are impacted: W-160505-MLR-03 (480-99735-3), W-160505-MLR-04 (480-99735-4) and TRIP BLANK (480-99735-7).

Method(s) 524.2: The analyte Methylene Chloride was outside recovery limits, biased high, in the Low Level Laboratory Control Sample (LLCS) for batch analytical batch 480-301615. Methylene Chloride was detected in the following samples: W-160505-MLR-05 (480-99735-5) and W-160505-MLR-06 (480-99735-6). Methylene Chloride is a common laboratory contaminate, therefore any detection may potentially be due to laboratory contamination and should be evaluated accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**HPLC/IC**
Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: W-160505-MLR-03 (480-99735-3). Elevated reporting limits (RLs) are provided.

Method(s) 300.0: The following samples were diluted due to the nature of the sample matrix: W-160505-MLR-01 (480-99735-1), W-160505-MLR-04 (480-99735-4), W-160505-MLR-05 (480-99735-5) and W-160505-MLR-06 (480-99735-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Job ID: 480-99735-2

### Laboratory: TestAmerica Buffalo

**Narrative**

**Job Narrative**
**480-99735-2**

**Receipt**
The samples were received on 5/6/2016 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.7º C.

**GC/MS VOA**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

# Certification Summary

Client: GHD Services Inc.
Project/Site: 002012, Highway 96 Landfill

TestAmerica Job ID: 480-99735-1

## Laboratory: TestAmerica Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

| Authority | Program | EPA Region | Certification ID | Expiration Date |
|---|---|---|---|---|
| Minnesota | NELAP | 5 | 036-999-337 | 12-31-16 |

The following analytes are included in this report, but are not certified under this certification:

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 524.2 | | Water | Dibromomethane |
| 524.2 | | Water | Naphthalene |

The following analytes are included in this report, but certification is not offered by the governing authority:

| Analysis Method | Prep Method | Matrix | Analyte |
|---|---|---|---|
| 524.2 | | Water | 1,1,2-Trichloro-1,2,2-trifluoroethane |
| 524.2 | | Water | 1,2-Dibromo-3-Chloropropane |
| 524.2 | | Water | 1,2-Dibromoethane |
| 524.2 | | Water | 1,3-Dichloropropane |
| 524.2 | | Water | 2-Butanone (MEK) |
| 524.2 | | Water | 2-Hexanone |
| 524.2 | | Water | 4-Isopropyltoluene |
| 524.2 | | Water | 4-Methyl-2-pentanone (MIBK) |
| 524.2 | | Water | Acetone |
| 524.2 | | Water | Acrylonitrile |
| 524.2 | | Water | Allyl chloride |
| 524.2 | | Water | Carbon disulfide |
| 524.2 | | Water | Dichlorofluoromethane |
| 524.2 | | Water | Ethyl ether |
| 524.2 | | Water | Iodomethane |
| 524.2 | | Water | m-Xylene & p-Xylene |
| 524.2 | | Water | o-Xylene |
| 524.2 | | Water | t-Butanol |
| 524.2 | | Water | trans-1,4-Dichloro-2-butene |
| 524.2 | | Water | Vinyl acetate |

# Method Summary

# Detection Limit Exceptions Summary

Client: GHD Services Inc.
Project/Site: 002012, Highway 96 Landfill

TestAmerica Job ID: 480-99735-1

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but great than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedure do not indicate corrective action for detections below the laboratory's PQL.

| Method | Matrix | Analyte | Units | Client RL | Lab PQL |
|---|---|---|---|---|---|
| 524.2 | Water | Trichloroethene | ug/L | 0.20 | 0.5 |
| 524.2 | Water | Vinyl chloride | ug/L | 0.20 | 0.5 |

| Question | Answer | Comment |
|---|---|---|
| Radioactivity either was not measured or, if measured, is at or below background | True | |
| The cooler's custody seal, if present, is intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the sample IDs on the containers and the COC. | True | |
| Samples are received within Holding Time (Excluding tests with immediate HTs).. | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter. | True | |
| If necessary, staff have been informed of any short hold time or quick TAT needs | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Sampling Company provided. | True | GHD |
| Samples received within 48 hours of sampling. | True | |
| Samples requiring field filtration have been filtered in the field. | N/A | |
| Chlorine Residual checked. | True | |

**Re: Analytical Results and Reduced Validation**
**Highway 96 Site**
**Residential Well Sampling**
**North Oaks, Minnesota**
**April and May 2016**

## 1. Introduction

The following document details a reduced validation of analytical results for residential well samples collected in support of the residential well sampling event for the Highway 96 Site in April and May 2016. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica), located in Buffalo, New York. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard GHD Services Inc. (GHD) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "Response Action Plan Quality Assurance Project Plan (QAPP)"; May 1994, Conestoga-Rovers & Associates, Report 30.

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

iii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items ii) and iii) will subsequently be referred to as the "Guidelines" in this Memorandum.

## 2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

With the exception of seven volatile organic compound (VOC) samples, the samples were properly preserved. Table 4 lists samples with improper preservation for VOC analysis. The samples were analyzed just beyond the required hold time of 7 days for unpreserved VOC analysis. Associated sample data are qualified as noted in the table.

The samples were delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

## 3. Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

Laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

With the exception of methylene chloride, all method blank results were non-detect. Table 5 lists the compound detected in the method blank. Associated sample data are qualified as noted in the table.

## 4. Surrogate Spike Recoveries - Organic Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for VOC determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed per the "Guidelines" and were within laboratory control limits, indicating individual sample performance was adequate.

## 5. Laboratory Control Sample Analyses

LCS and/or laboratory control sample duplicates (LCSD) are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects. The relative percent difference (RPD) of the LCS/LCSD recoveries is used to evaluate analytical precision.

LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

***Organic Analyses***

The LCS/LCSD contained all compounds of interest. All LCS recoveries and RPDs were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision.

***Inorganic Analyses***

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines" and were within the laboratory control limits, demonstrating acceptable analytical accuracy.

## 6. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the preparation process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original investigative sample result for any analyte is significantly greater than the associated spike concentration, the recovery and RPD for that analyte are not assessed.

MS/MSD analyses were performed as specified in Table 1. The laboratory performed additional site-specific MS/MSD analyses internally.

***Organic Analyses***

The MS/MSD samples were spiked with all compounds of interest. The percent recoveries and RPD values were evaluated using the "Guidelines".

All percent recoveries were within acceptable criteria. With the exception of bromomethane, chloromethane and vinyl chloride, the associated RPD values were within acceptable criteria. The RPD for bromomethane, chloromethane and vinyl chloride were above the control limits. However, the associated sample results were non-detect; therefore, no qualification of data was necessary based on outlying MS/MSD results.

***Inorganic Analyses***

The MS/MSD samples were spiked with the analytes of interest. The percent recoveries and RPD values were evaluated using the "Guidelines". Table 6 lists outlying MS/MSD results. Associated sample data are qualified as noted in the table.

## 7. Field QA/QC Samples

The field QA/QC consisted of two trip blank samples (VOCs), four field blank samples (per parameter), and four field duplicate sample sets (per parameter).

***Trip Blank Sample Analysis***

To evaluate contamination from sample collection, transportation, storage, and analytical activities, two trip blank samples were submitted to the laboratories for VOC analysis, as identified in Table 1. The trip blanks were reported to be non-detect for the compounds of interest.

### *Field Blank Sample Analysis*

To assess ambient conditions at the Site, four field blanks per parameter were submitted for analysis, as identified in Table 1. All results were non-detect for the analytes of interest.

### *Field Duplicate Sample Analysis*

To assess the analytical and sampling protocol precision, four field duplicate sample sets per parameter were collected and submitted "blind" to the laboratories, as specified in Table 1.

If both sample results associated with the field duplicate sample set are detects greater than five times the reporting limit (RL), the RPD must be less than 50 percent. If one of the sample results associated with the field duplicate sample set is non-detect, the RPD must be less than 50 percent (using the RL in place of the non-detect result to calculate the RPD). If any reported concentration in the field duplicate sample set is between one times the RL and five times the RL, the difference between the results must be less than one times the RL value (using the RL in place of the non-detect result to calculate the difference). If any reported concentration in the field duplicate sample set is less than the RL, the difference between the results must be less than one times the method detection limit (MDL) value (using the MDL in place of the non-detect result to calculate the difference).

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

## 8. Analyte Reporting

### *VOCs (524.2)*

TestAmerica - Buffalo reported detected results down to the laboratory's MDL for a select list of VOC analytes, as approved by the Minnesota Pollution Control Agency (MPCA). This list includes: 1,1-dichloroethane, cis-1,2-dichloroethene and vinyl chloride. Positive analyte detections less than the quantitation limit (i.e., RL) but greater than the MDL were qualified as estimated (J) unless qualified otherwise in this memorandum. The remaining VOC analytes were reported down to the laboratory RL. Non-detect results were presented as non-detect at the laboratory RL.

### *Chloride (300.0)*

TestAmerica - Buffalo reported detected results down to the laboratory RL. Non-detect results were presented as non-detect at the laboratory RL.

## 9. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.
